

Efficient Switch and Power Plant De-Install Saves on Equipment Redundancy, Streamlines Infrastructure

A leading carrier in high-quality broadband services needed a comprehensive de-installation, packaging, and relocation of a Lucent 5ESS powered-up switch, switch storage cabinets, and onsite power plant. The carrier required a company that could consult on which equipment was salvageable, relocate the equipment safely to the designated holding facility, and properly dispose of equipment that had reached the end of its lifecycle.

The Solution

American Communications technicians - qualified on the Lucent platform - were mobilized to conduct a comprehensive site walk-through and submit a statement-of-work, outlining a detailed logistics process according to project requirements. During implementation, the American Communications team offered suggestions on which equipment should be relocated and which should be removed and disposed, thus eliminating costly equipment redundancy across the carrier's network. All power plant equipment were disposed of in accordance with Hazmat and environmental regulations.

American Communications team delivered the following:

Optimized Capitalize Assets – By understanding the equipment value, American Communications was able to consult on which equipment was reusable and should be relocated to a holding facility for future use, allowing the carrier to maximize their current assets.

Adherence to Disposal Regulations – With American Communications team knowledgeable on environmental regulations for equipment disposal, the concern that equipment would be disposed of improperly was obviated, as was the possibility of the carrier receiving stiff penalties for causing environmental damage.

The Results

American Communications provided the skills and resources to safely and efficiently de-install powered up equipment in accordance with Hazmat and environmental laws, preparing the viable equipment ready for easy installation when needed.

About American Communications

American Communications is a leading supplier of new, surplus and used telecommunications hardware, supporting carriers, service providers, enterprise clients, end users, and resellers around the world. We provide turnkey solutions for data, wireless, and wireline networks, including buying and selling equipment, tower and field services, equipment test and repair, installations, de-installations, asset recovery, site negotiation and lease administration, and technology migration solutions.

American Communications maintains an extensive equipment inventory and an established customer base nationwide and abroad. American Communications is headquartered in Santa Barbara, California, with sales and technical operations in Dallas, TX and Latin American headquarters in Buenos Aires, Argentina.
